Employee Recognition

Apco Combination Air / Vacuum Release Valve Wrench

Operations staff from Calaveras Public Utility District is submitting an air valve wrench designed by our supervisor Todd Fischer for our safety recognition award , Todd has created this valve wrench described below because of our need to extract a heavy air / vacuum combo valve from confined vaults throughout our water distribution system, all too often the 135 Apco air valve is very tight and require a lot of effort to unscrewing this air valve from our high pressure water system, this process can be very challenging at times.
