## Beep, beep! It's so easy!

Our operations and Maintenance supervisor, Paul Gradolph, realized that most of us have backup warning devices on our heavy equipment and large vehicles, but not on our pickup trucks, customer services vehicles or other staff vehicles. He found a backup light replacement bulb, which includes an audible alert when the vehicle is placed in reverse, at the local auto supply store. Installation is as simple as replacing the light bulb and the cost are nominal, about \$25. Now all of our vehicles, frequently in residential neighborhoods, have an audible alarm when backing up!
